### NCC to assist with more secure power supply in Malmö

**NCC is being commissioned by Linjemontage to carry out earthworks and pour the foundations when Svenska Kraftnät renews a 400 kV line in Skåne. This new high-voltage line will help to ensure increased reliability in the Malmö region. The order is worth around SEK 160 million.**

“We have worked with NCC on other, similar projects in the past and are now taking these good experiences with us as we expand the national grid in southern Sweden. We are pleased to be able to help improve reliability in Skåne,” says Johan Holmgren, project manager at Linjemontage.

NCC’s contract includes earthworks and the casting of new foundations for 136 pylons on a 42-kilometer stretch of power line between Hurva in the middle of Skåne and Sege on the outskirts of Malmö. The contract also includes the construction of access roads to the construction sites, restoration of the ground after the work and demolition of the previous foundations.

“NCC has extensive experience and expertise in implementing projects where the work is to be carried out over a large area with many different construction sites, in this case a stretch of more than 40 kilometers. And where different and unique requirements regarding environmental and water management, for example, are in force at almost all of the 136 construction sites,” says Christer Stenson, production manager at NCC Infrastructure.

This is a design-build contract where NCC is a subcontractor to Linjemontage i Grästorps AB, which is working on behalf of Svenska Kraftnät to build the posts and lay the phase lines for the project.

NCC’s construction work will commence in April 2020 and is expected to take two years. The contract will be registered among orders in the first quarter of 2020 in the NCC Infrastructure business area.
